

HOLROYD

BESPOKE SURFACE HEATING ELEMENTS

APPLICATIONS:

Holroyd Components supply enclosure heaters for protection against frost and condensation in enclosure's containing electronic equipment such as ATM's, temperature control panels and control valve housings.

As standard stock items, enclosure heaters can be supplied at 25, 50, 100 and 200 watt, for 120V or 240V supply.

Heater assemblies can be supplied with either integral or remote 15°C / 60°F air temperature sensing thermostats.

MAIN POINTS:

- 25, 50, 100 and 200 watt heaters available @120V
- 50, 100 and 200 watt heaters available @240V
- 20" (500mm) PTFE leads as standard
- Manufactured using etched foil technology for precise, even heating
- Integral or remote air temperature sensing thermostats ensure heater operation in condensation forming and other air heating application conditions.
- Short lead times
- Heaters supplied pre attached to mounting plate for easy installation
- Heaters available with UL / CSA component recognition

CHARACTERISTICS:

Enclosure heaters have a good resistance to the following; photodegradation, weathering, fungus & bacteria, acetone, alcohol, formic acid, brake fluid, acetic acid, greases, hydrochloric acid 10%, sulphuric acid 10%, waxes and plasticisers. In addition to this, the heaters have adequate gas permeability and good steam resistance up to 130°C and 2.5 bar respectively.

INSTALLATION:

The enclosure heaters are factory fitted to an aluminium mounting plate that allows for easy installation. The mounting surface is perpendicular to the heater and has two mounting holes. Heaters with integral thermostat should be vertically mounted with the sensor towards the base of the enclosure.

THERMOSTAT SPECIFICATION:

Close 5C +/-3, open 15C +/-3
Close 40F +/-5, open 60F +/-5
Rated for 100,000 cycles @ 10amps 250V / 15amps 120V

Contact Holroyd for enclosures with surface areas larger than 50 Ft² / 4.65 M²
In most cases multiple heaters should be used in applications requiring wattages greater than 500 watts.
